Education

York University

Toronto, Ontario, Canada

Bachelor's of Science, Computer Science (September 2017 - October 2023)

Skills

- Programming Languages: Java, JavaScript, C
- Web Development: HTML, CSS, React.js, Node.js
- Databases: MongoDB, Firebase
- Tools & Platforms: GitHub, Docker, Google Cloud Platform (GCP), Eclipse, Visual Studio Code

Certifications

[Scrimba Front-End Development](#)

Issued April 2024

[w3Schools SQL](#)

Issued June 2024

Projects

- [Breezy](#) - Collaborated in the development of a full-stack app built with React.js and TailwindCSS for the frontend and Node.js/Express.js for the backend, Dockerfile for containerization and hosted on Google Cloud. Features real-time weather updates, AI-generated weather descriptions based on current weather conditions and a responsive and modern UI.
- [GM-inventory-management](#) - Developed a full-stack CRUD web application for inventory management, built with React.js and TailwindCSS on the frontend, Node.js and Express.js on the backend, using Docker for containerization and deployed on Google Cloud. It features MongoDB serving as the main database, with authentication and role-based access control implemented with Firebase and MongoDB.
- [Portfolio Website](#) - Designed and developed a responsive, multi-page portfolio website with React.js framework and deployed with Netlify, including animations and dynamic components.
- [Movie Watchlist](#) - Developed a JavaScript web application that lets users search for movies fetched from the OMDb API. Users are then able to add movies to a watchlist, which is stored in local browser storage.
